for an obligation-free measure and quote

Servicing Christchurch for over 20 years

Trust Christchurch Glass for a more comfortable home all year round

## How does the Retro-fit process work?

- STEP 1** After discussing the problems that your home is experiencing (heat loss or gain, noise, condensation, glare and fading) our representative will conduct an initial free measure of the windows that you want double glazed, and provide an obligation free quote.
- STEP 2** If you choose to accept the quote, we will complete a final measure, get the production of the double-glazed units underway in our factory and set a date for installation that suits you.
- STEP 3** On the day of installation, our retro-fit team will bring the double-glazed units to your home and begin installing them. The process is quick and unobtrusive.

## Make this the year that you enjoy the benefits of double-glazing

A warmer house in winter and cooler in summer. And because there's less need for heating and cooling systems you'll be reducing energy consumption, which saves on your power bills and helps the environment.

Eliminate drafts with the inclusion of the draft seal. This will eliminate the annoying drafts that are typical of old timber joinery.

Reduced condensation, which is that crying look that windows get. This is a serious problem, it causes mould and mildew, and in some cases it will also rot timber window frames and damage your family's health.

Reduced noise for a calmer, quieter home. High performance double glazing can reduce outside noise by up to 60%, making it a great investment if you live by a busy road or beneath a flight path.

Enhances the resale value of your home. Now an older home can be just as desirable to the purchaser who wants to ensure that the home they buy is efficiently insulated. With retro-fit double glazing any home can get the benefits!

Reduces interior fading without the need for view blocking drapes.

Discourage intruders for safety and security. It's more difficult for intruders to break in through double glazed windows, particularly if you include laminated or toughened glass.
